

QB STREAM WEEK 7

10/20/2020

These five QB are streamable options and currently are rostered in less than 60% of Yahoo leagues.

JUSTIN HERBERT - LAC VS JAX

Coming off a season high four passing TDs, he has emerged into a top 12 option despite all the injuries to the offense. He also has more than 250 passing yards in every game this season. Facing against the Jaguars, he will have opportunities to take shots down the field and could end up being a weekly start with positive matchups in the upcoming weeks.

CARSON WENTZ - PHI VS NYG

I have to give him credit, he's adjusted his playing style and has been a rushing threat with more than 30 rushing yards in three out of the last five games. He's also been a goal-line option with four rushing TDs this season. While his passing numbers are disappointing, the rushing production provides a floor that makes him a streaming option against the Giants.

GARDNER MINSHEW - JAX VS LAC

Welcome to my section about an "epitome of a streaming quarterback." He had an up and down performance against Detroit but gave you that 20 point floor that keeps you in your matchups. Going against the Chargers, he will need to score to keep the game competitive. With Chark getting healthier, I'm optimistic on his fantasy outlook against an injured secondary.

TEDDY BRIDGEWATER @ NO

Coming off a bad performance against Chicago, you may not have to bid much or use your waiver priority to acquire this guy. Make no mistake, he's a streaming option against an underwhelming Saints defense that gave up four passing touchdowns to a rookie quarterback. He may not have the upside as other options, but he's played well recently, giving me confidence in his floor.

JIMMY GAROPPOLO - SF @ NE

I know on paper, this doesn't seem appealing, but there's some upside in this matchup. While the Patriots are a good defense, I'm banking on another week for him to get healthier along with Deebo and Kittle recently returning from their own injuries. I'm confident a top 15 finish is within the likely range of outcomes and will likely be available.
